

High Pressure Test

We provide both on-site and in-house shop based hydro-static testing of piping, equipment and components for the oil and gas industry.

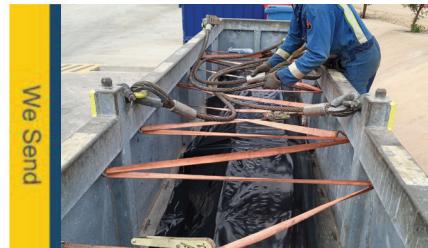

We can perform hydro-static tests up to 15,000 psi and to meet the requirements of the client or project specific standards. We use tested and certified equipment, instruments, charts, digital recorders and provide comprehensive documentation.

Tests are executed with high pressure technology equipment by a provider of smart high-pressure solutions with more than 10 years of experience in the field.
