

Blasting

We perform Water Blasting Services for assets and facilities such as storage tanks, offshore platforms, heliports, and others that are susceptible to damaging elements like salt, sand, water, paint, mold, corrosion and more.

Our Water Blasting Services delivers quick and easy surface preparation, paint or corrosion removal with minimal equipment set-up, and safe working conditions. From a safety perspective, UHP water system reduces the release of hazardous or airborne materials, it is considered among the most environmentally friendly cleaning methods therefore diminishing the need for containment and offer an opportunity for personnel to be able to work side-by-side.

These benefits help diminish costly downtime and an on-site personnel footprint. Our innovative system provides water pressure as high as **2000 Bar** and our professionally trained team have the necessary skills to perform the service as per client's or facility's requirements
