

## DrillRdillo Drilling Scraper by **TUBOSTRANS**

The DrillRdillo Drilling Scraper is a 360° contact robust scraper tool with retracted scraper blades which can be activated when desired through ball drop. It is designed to be run in a drilling string in a switched-off mode while drilling open holes section. When wanted the blades are activated to allow scraping of the casing.

### Applications

- Scraping the liner hanger / lower completion packer setting depth in same run as hole section drill out.
- Unstable open hole formations where time to land lower completion is critical.

### Features

- 12 robust scraper blades arranged to provide 360° coverage of the casing wall.
- Blades are retracted within the body to prevent damage or sticking during drilling operations.
- When required a simple and reliable ball drop is used to activate the blades
- Single piece body made from high strength steel.
- Carbide faced ribs for robustness.
- Available in sizes 5,750" & 8,300" OD

### Benefits

- Cost savings
- Eliminates the need for a dedicated scraper run.
- Increases Well Productivity
- Reduces time between drilling to target depth and running completions.
- Integrity
- Mitigates premature lower completion failure.
